A

SERIES OF TABLES,

EXHIBITING

THE GAIN AND LOSS

TO

THE FUNDHOLDER,

ARISING FROM

27289

THE FLUCTUATIONS IN THE VALUE OF

THE CURRENCY.

From 1800 *to* 1821.

BY ROBERT MUSHET, Esq.

LONDON:

PRINTED FOR BALDWIN, CRADOCK, AND JOY,

PATERNOSTER-ROW.

1821

THE object of the following Tables, is, to place before the Reader the advantages and disadvantages which have arisen to the Fundholder, from the state of the currency, since the year 1800.

The utility of this inquiry, I think, cannot be questioned, from the constant attempts now made to represent the situation of the Fundholder as highly advantageous, arising from the circumstance of his now receiving in a currency of standard value, the interest of the capital which he lent to Government in a currency considerably depreciated. Besides the utility of this investigation, as a matter of curiosity, it is impossible not to attach considerable importance to it, from the wish, not secret, but expressed, of a considerable party in the country, to break faith with the Fundholder, and to compromise their own and their country's honour; and that, too, in the absence of any proof, that the Fundholders, as a body, have derived any gain whatever in consequence of the depreciation which has existed upon the currency since 1800. The Government, highly to their honour, have discouraged every attempt that has been made; and I feel persuaded, that those who wish to interfere with the property of the Fundholder, do so from a belief, that he is actually deriving great advantages from the increased value of our currency; though, even upon this ground, I should differ in opinion from the party in question, for the Fundholder certainly lent his capital to Government in periods of great exigency, and upon an express

understanding, that, at six months after a definitive treaty of peace, the currency was to be placed upon its ancient footing as to value. As no respectable party, however, in the state, can wish for the destruction of their country's faith and honour, let us hope, that the attempts that have been made to affect the property of the Fundholder, have taken place in the absence of facts; and that when his case is more fully and perfectly understood, there will then be but one mind and one spirit in the country, as to the obligation to maintain sacred those engagements, to which the Government and the country at large are parties.

I shall now proceed to state the principle upon which the following Tables are constructed, and describe the documents from which the facts have been taken.

To ascertain the value of the interest of funded property from 1800 to 1821, we must take it in relation to the market price of gold; because, when the interest was paid in paper, under a price of gold, higher than the Mint price of £.3. 17*s*. 10½*d*., the Fundholder, though nominally receiving the same number of pounds, was, in fact, receiving a less value. So that to ascertain the actual value of the interest paid to the Fundholder from 1800 to 1821, we must value it in the market price of gold during those years, by reducing the nominal value of the £.100 to its value in bullion. In illustration of the principle, see Table, No. 1. By an account of the National Debt laid before the House of Commons 12th February, 1821, and printed, it appears, that the total amount of the funded debt of Great Britain, on 1st February, 1800, was £.471,885,923. The average market price of gold, from 1 Feb. 1799, to 1 Feb. 1800, was £.3. 17*s*. 10½*d*. per ounce, during which period I have supposed, for the sake of simplicity, that the debt existed; so that the interest paid, at the rate of 5 per cent (which I have also assumed for the same reason, as the common rate of interest, without reference to the actual rate, at which the debt was contracted), was £.23,566,796. But, from February 1800 to February 1801, the average market price of gold was £.4. 5*s*. per oz., and the value of the

£.100 was reduced to £.91. 12s. 4d.* so that if £.100 was worth £.91. 12s. 4d., £.23,566,796 was worth only £.21,591,112; and the loss sustained by the Fundholder, from receiving his interest in this depreciated money, was, in one year, £.1,975,684. [See column 6th, Table 1.] The same amount of funded debt has been subjected to the same process, and the annual loss to the Fundholder stated (as will be found in the 6th column), and the total loss amounts to £.40,099,891.

But the above loss is not the only one which the Fundholder has sustained; for from 1800 to 1821, a considerable amount of debt was contracted above that redeemed, and at various prices of gold. When the debt was contracted under one price of gold, and the interest paid under a higher price, the Fundholder sustained a loss, as has been already explained; and when the interest was paid under a lower price of gold than that under which the capital was lent, the Fundholder was a gainer, as will be seen by a reference to the year 1801. [Table, No. 3.]

In the year 1800 the debt contracted above that redeemed, was £.6,713,890, and was borrowed in money at par. But the interest was paid at the rates per £.100 as represented in column 4; and the loss to the Fundholder upon that loan was £.571,204. [See Table 2.]

The debt contracted above that redeemed in 1801, was £.21,602,422, and at a rate per £.100 of £.91. 12s. 4d.; and as the interest was occasionally paid at a higher rate per £.100, the Fundholder, upon the average of the years from 1801 to 1821, was a gainer upon that loan of £.69,457. [Table 3.]

In the same way has the debt contracted above that redeemed in every year been investigated, and the profit and loss to the Fundholder stated, as will be seen by referring to the Tables from No. 1 to No. 20. The

* It may be proper here to observe, that in taking the average prices of gold, the fractions of a penny have been thrown out.

total loss to the Fundholder upon the loans contracted above the debt redeemed, from 1800 to 1821, by receiving his interest in a currency less valuable than that in which he lent it, was, £.9,530,972 [See the abstract of the Tables].

The losses of the Fundholder, however, do not terminate here; for it is perfectly fair to say, that if he had received his interest in *Standard Currency*, that portion which we have proved him to have lost, might have been put out to interest, for it does not necessarily follow, that the Fundholder expends the whole of his income. In the Tables Nos. 21 to 40, I have calculated at simple interest the interest lost by the Fundholder upon the debt existing on the 1st Feb. 1800; and the additional amount of loss to the Fundholder, as will be seen by the abstract of the Tables, is £.18,519,120.

Following the same principle, and calculating the interest of the *interest lost* by the Fundholder upon the debt contracted above that redeemed from 1800 to 1821, as will be seen in Tables No. 41 to 145, the loss to the Fundholder will be farther increased by a sum of £.4,128,559, making the total loss £.72,278,542.

On the other hand, the Fundholder has gained upon those loans, the interest of which has been paid in a currency more valuable than that in which they were made to the government, as has been already explained by a reference to the year 1801. Table No. 3. The principle of the calculation here is the same as in the former case; for example—in the year 1801, the debt contracted above that redeemed, was £.21,602,422, and the interest at 5 per cent was £.1,080,121; the price of gold was £.4. 5*s*. 0*d*. per ounce, and the £.100 worth £.91. 12*s*. 4*d*. In the year 1802, the price of gold fell to £.4. 4*s*., and the £.100 was worth £.92. 14*s*. 2*d*.; so that if £.91. 12*s*. 4*d*. became worth £.92 14*s*. 2*d*. £.1,080,121 would be £.1,092,990, and the Fundholder would gain £.12,870. In the year 1803, the price of gold fell to £.4 per ounce, and the value of the £.100 was £.97. 6*s*. 10*d*., by which the Fund-

holder gained £.67,490, and so on, during the fluctuating price of gold from 1801 to 1821, as will be seen by referring to the Tables No. 3, to No. 20. By the abstract of the Tables it will be found, that in these years the Fundholder was a gainer, by having his interest paid in a currency more valuable than that in which he lent, by a sum of £.15,354,948.

It is fair, with the gains of the Fundholder, as with his losses, to calculate the interest upon them at 5 per cent, which I have done in Tables No. 146 to 230, by which he gains a further sum of £.3,335,562, making the total gains of the Fundholder, by receiving his interest in a currency more valuable than that in which he lent it, of £.18,690,510. This sum being deducted from the aggregate losses of the Fundholder, amounting to £.72,278,542, leaves a balance of loss of £.53,588,032. This sum, at 5 per cent, would constitute an annual loss of £.2,679,401. But the total amount of debt contracted above that redeemed from 1800 to 1821 was £.410,128,181, and at an average of £.87. 6*s.* 5*d.* per cent, which makes the real interest exceed the nominal by £.2,977,572; thus, if £.87. 6*s.* 5*d.* be worth £.100, £.20,506,409, the interest at 5 per cent, of the debt contracted above that redeemed, will be worth £.23,483,981. So that if the £.2,679,401, the annual interest of the losses sustained by the Fundholder, be deducted from the annual gain of £.2,977,572, the balance of gain in favour of the Fundholder will be £.298,171. If we value this gain at 20 years purchase, which is rather more than the present rate of interest will justify, the whole gain to the Fundholder, by the depreciation of the currency, will be £.5,963,420.

If, however, the loss to the Fundholder had been calculated at *compound*, in place of *simple* interest (and I should have been justified in doing so, and would have done it, but for the great increase in the size of the Tables), the result would have been a very considerable loss, instead of a gain to the Fundholder.

We shall give one or two examples in proof of this assertion. By Table No. 21, the loss of interest, *upon the interest lost* by the Fundholder

upon the debt existing in 1800, was £.93,784 per annum, which sum at 5 per cent would again be £.4,957 per annum, and the value of £.4,957 per annum, at compound interest, for 21 years (£.1 being worth £.35.7192.5181 or £.35. 14s. 4d.*), would be £.176,345, for 20 years £.163,246; and for the whole series of years, from 1800 to 1821, the amount would be £.1,629,715.

Again, the loss of interest, upon the interest lost by the Fundholder, upon the debt existing in 1800, was in the year 1801, £.85,920 per annum, which sum at 5 per cent would be 4,296, and the value of £.4,296 per annum, at compound interest for 20 years, would be £.1,264,661. So that, in these two cases alone, the Fundholder lost the sum of £ 2,893,376, and if the other losses were subjected to the same process, it would be found that the Fundholder was really a loser instead of a gainer by the state of the currency since 1800.

It may, however, be said, that if the gains of the Fundholder had been subjected to the operation of compound interest, in the same way, the result would have been in favour of, and not against the Fundholder. By an examination of the abstract of the Tables, however, it will be found that this would not be the case. If we take the loss to the Fundholder on the debt contracted above that redeemed, and the loss upon the interest lost to the Fundholder, we shall find that they amount to a sum of about £.33,000,000, while, on the other hand, the gain to the Fundholder upon the debt contracted above that redeemed, and the gains upon the interest gained by the Fundholder, amount only to about 18¼ millions, leaving a balance in this way, considerably against the Fundholder, and which would appear, if the respective sums of both the debtor and credit side of the Fundholder's account were calculated at compound interest.

I have thus attempted to prove, that, however much the Fundholder has been represented to be a gainer by the state of the currency since 1800, in point of fact, he has not gained, but lost. Let us, therefore,

* See Smart's Tables of Compound Interest, Table No. 5.

hope, that those who have affirmed, and (in my opinion, in the absence of proof), that he has greatly profited from the restoration of the currency to standard, will now meet the question fairly, and restrain themselves from attacks which do not seem to me to be founded in fact; and that we shall rather find them strengthening the national credit, by coming to the support of Government, who have so honourably to themselves, and so consistently with the national dignity and integrity, rejected every attempt to break faith with the national creditor.

GENERAL ABSTRACT.

	£.	£.
Loss upon the Amount of funded Debt, 1st Feb. 1800—Table No. 1		40,099,891
Loss upon the Debt contracted above that redeemed, 1800 to 1821—Table 2 to 20		9,580,972
Loss upon the Interest *lost by* the Fundholder, 1801 to 1821—Table 21 to 40....		18,519,120
Do. ... Do. ... Do. ... Do ... Table 41 to 145...		4,128,559
		72,278,542
Gain upon the Debt contracted above that redeemed 1st Feb. 1801 to 1821 Tables 3 to 20	£.15,354,948	
Gain upon the Interest *gained* by the Fundholder, 1801 to 1821 Tables No. 145 to 230	3,335,562	
		18,690,510
		53,588,032
Interest of the above loss at 5 per cent is annually		2,679,401
The total amount of Debt contracted above that redeemed from 1800 to 1821 [see Table No. 1] was £.410,128,181, at an average of £.87. 6s. 5d. per cent. which makes the *real* interest exceed the *nominal* by		2,977,572
Annual permanent gain to the Fundholder		298,171
